

Weekly report (2012.11.26~12.2)

Done

- 1) This week, I put detection aside and start to do some follow-up work such as merge all the split segments together to make a complete part. This job contains two MapReduce tasks, one for detection, another one for merge. The merge step only find the connection between adjacent segments, there still needs another program to handle the global merge. Still coding.
- 2) As to the Meteorology Project, I get my task to draw a textured earth in a parallel manner, some prepare work such as learning OpenGL and reading new code by Sikan.

To Do

- 1) Continue the two works mentioned above.
